Devium

Pitch Deck

Dream it, Code it, Own it, Monetize it!

Web3 based software development platform where **developers own and monetize their code**

Why we are building Devium?

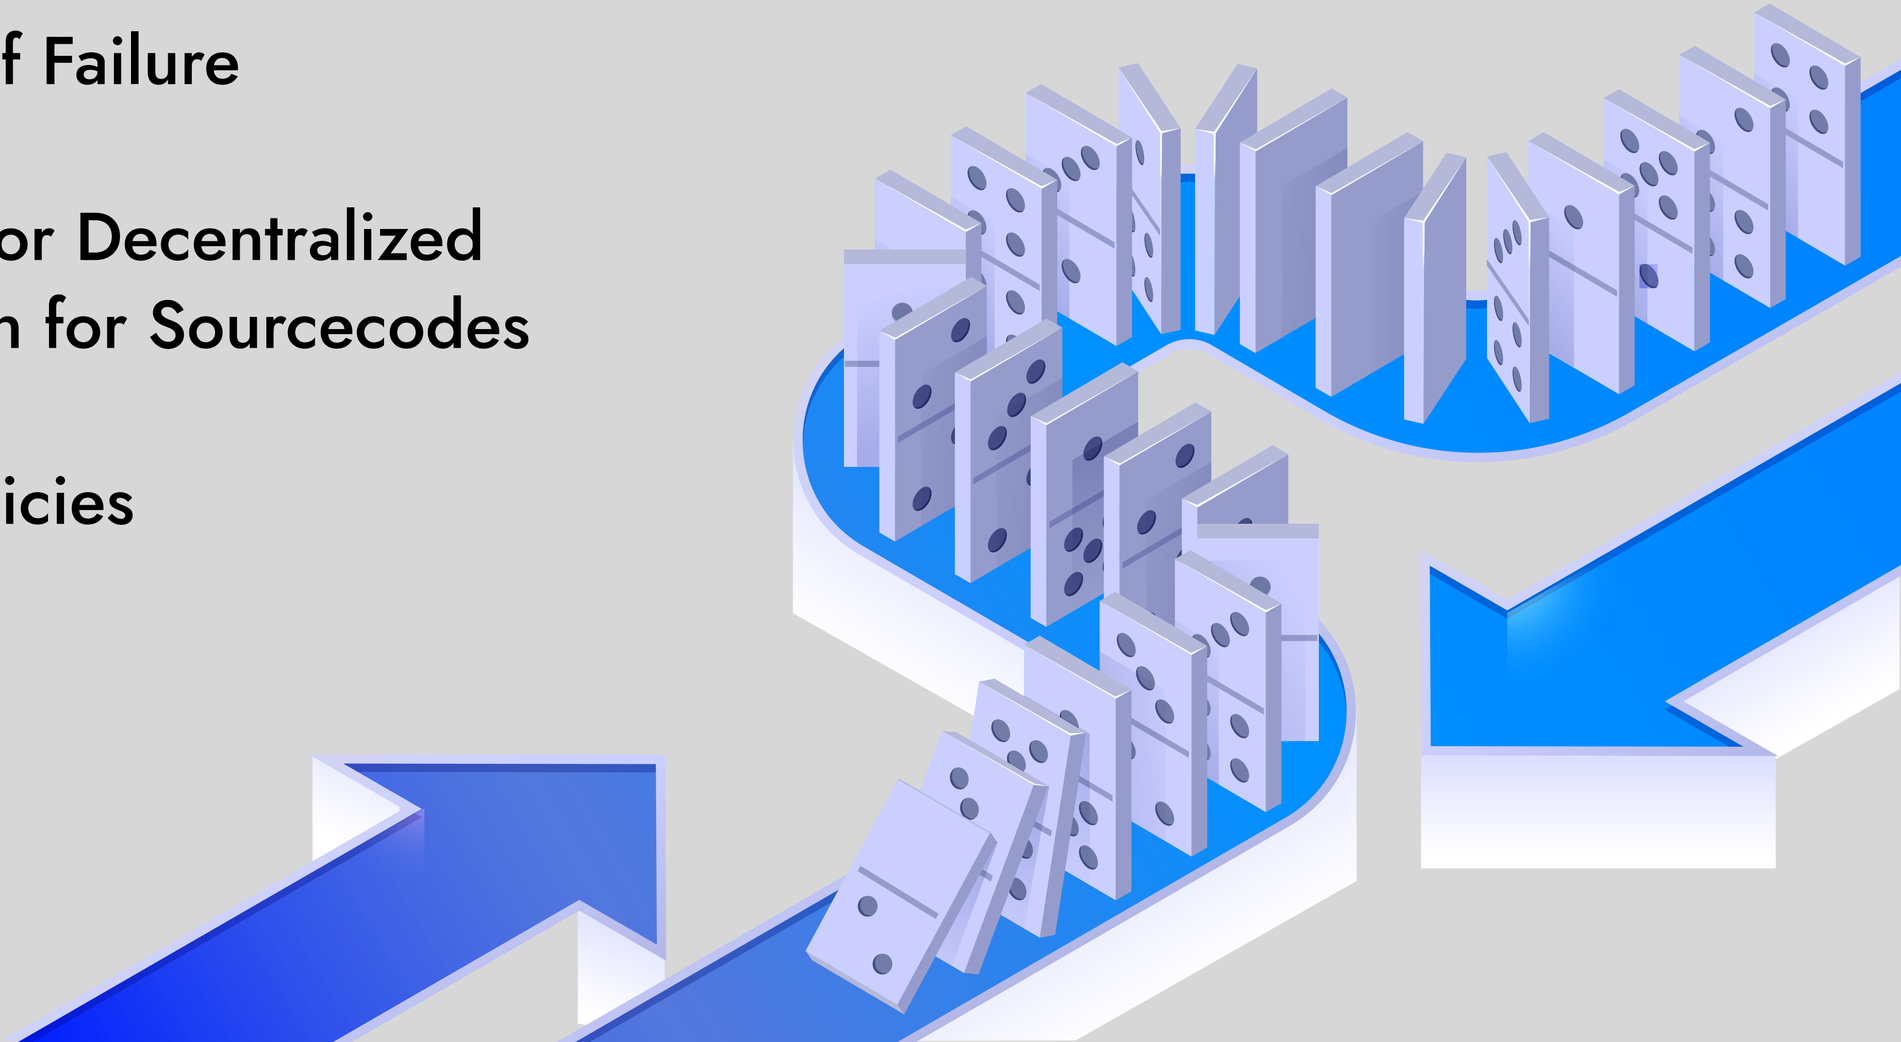
We believe that

coding is an *art*!

And we believe that developers, like any artist should have independently, securely, uniquely, owning their assets and earning an income from what they produce.

Problem

- Security
- Single Point of Failure
- Ownership
- Not Tailored for Decentralized
- Low Protection for Sourcecodes
- Censorship
- Impossing Policies
- Transparency



What is Devium?

Dream it & Code it!

Code freely and bring your dream projects to life!
There is **no authority** in Devium! It just has all the development tools to **make your life easier.**

Own it!

NFTs are not just pictures! **License your source code** and convert it to an NFT with Devium.
So your **source codes are now in your wallet!**

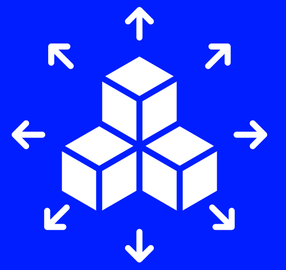
Open source libraries turn into
revenue-generating marketplace

Monetize it!

We create a **marketplace** for developers
to **monetize licensed source code** and gather all kinds of developers here.
Thus, all resources for **quality development** will be on a single platform.

TRANSFORMATION

We are bringing the technologies that exist in Web2 to Web3. At the same time, we collect all the tools that developers need on a single platform. Thus, we offer a unique solution for developers.



INNOVATION

We provide different licensing models for licensing source code. In this way, we create a definitive solution for ownership and monetization of source code. They will also have a convenient platform for seamless development with the online code editor.

Features of Product

Online Code Editor

Source Code to NFT

Licensing

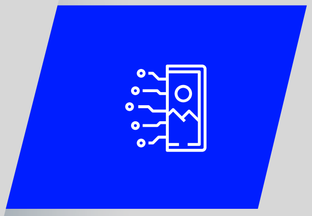
Market place

Source Code Licensing with NFT

01

Upload source code

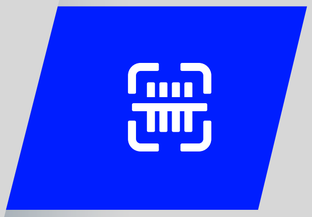
The scope of the project does not matter. Upload to convert to NFT when available.



02

Scan to prove your uniqueness

The smart engine scans to prove that there is no equivalent project on the Devium platform.



03

Convert it to NFT

If you want to license the source code, you need to convert it into a NFT.

04

Monetize it on Marketplace

Now that you've passed this step, you can now sell your source code as an asset to generate income.

Founders

Latif Vardar / CEO

For more than 20 years, Latif has worked as a CTO in companies on a global scale, as well as a manager in the establishment and development processes of leading companies in Turkey's own sector. He has the experience of managing more than 300 teams at the same time in systems with over 20 million users. Apart from traditional software, he has expertise in areas such as AI and Robotics. Latif, who has been developing on Blockchain architecture since 2018, is responsible for the technological processes of the Devium project, of which he has been a partner since 2021, with the experience he gained.

Bülent Kaplan / COO

Bülent has been operating in the software industry as a manager and operations manager for more than 20 years. He played an active role in determining the business models of numerous technological start-ups, preparing their financial projections and managing their operation processes. He currently provides consultancy to many companies on a local and global scale. Since 2018, he has been conducting research on crypto exchanges and blockchain technology and has been advising new startups. He is responsible for the operational and financial processes of the Devium project, of which he has been a partner since 2021.

Turan Can Ekmekçi / CMO

Turan Can has taken an active role as a manager in the marketing activities of many local and global companies in the field of cyber security, technology and e-commerce for about 10 years. In addition to leading many award-winning PR campaigns, he is experienced in creating marketing budgets, establishing competent teams and establishing the right collaborations with third party companies. Since 2019, he has been closely interested in Blockchain and crypto exchange and has turned his focus to these issues. He is responsible for the marketing activities of the Devium project, of which he has been a partner since 2021.
